

Installation

- Your tank must have a solid flat base.
- It should be supported across the entire base area.
 - This support should extend 300mm on all sides.
- The tank is guaranteed against faulty materials or workmanship provided that installation guidelines are followed.

Tanks have been designed for strength and appearance
 They are very robust but not indestructible if abused.
 Do not over tighten pipework when fitting

'Bespoke tanks available on request, please contact us with your requirements'
